ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 3 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Tourtellotte, US 3536941.

Tourtellotte shows a multi type outer core linear motor having a plurality of single coils 41 and 39 with laminations around the coils to form a cylindrical structure. Note inner core comprising pole piece 9. Armature 59, has magnet rows which align with the core structure 47L and 47R which enclose coils 39 and 41, respectively. Finally note that coil bobbin 37 inherently forms an insulating member located between the core structures. The cross-hatching (alternate thin and thick lines) indicates the material used is plastic and therefore insulates.

Allowable Subject Matter

Claims 4-7 and 9-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Chitayat, Cho and Goldowsky show linear motors having plural annular coils on the outer core. Young shows a dual coiled outer core with insulator 82 between the coils. Benson shows plural coils separated by insulator 50 in the inner core of the linear motor shown in figure 3. Corda et al. show plural coils separated by brass spacing rings 27.
